

Input prompts

```
prompt = f"""
```

You are helping to classify Amazon products into multiple categories.

Document index: {doc_idx}

Product text:

```
W"W"W"{doc_text}W"W"W"
```

Candidate labels (each with id, name, and description):

```
{candidates_str}
```

Your task:

- Choose the best 2 or 3 labels from the candidate list that match this product.
- Only use the given label ids.
- If none of the candidates are appropriate, return an empty list.

Return the answer as a single JSON object, with this exact structure:

```
{{"labels": [id1, id2, id3]}}
```

Examples:

```
{{"labels": [17, 135]}}
```

```
{{"labels": []}}
```

Answer with JSON only, without any extra explanation.

```
"""
```

Generated outputs

```
